**Purpose of Contact:** B966 Equipment Removal

## Discussion

The Building 966 Decon system includes the pad, overspray curtains, shed and pressure washing equipment. Directly north of the pad is a separate containment area consisting of five 2000-gallon HDPE tanks and associated equipment. The sludge in the poly tanks has been sampled and analysis did not identify any RCRA waste or constituents. The equipment to be removed in Phase I, did not receive any RCRA waste and has been identified as separate from the potentially contaminated pad area, which is specifically identified as the RCRA Unit. As discussed with and agreed to by James Hindman and David Kruchek, CDPHE the work scope at Building 966 will be divided into two separate phases. In Phase I, all equipment, pipe/hose, HDPE tanks, sludge, secondary containment liner, plastic pallets, concrete pads, stairs, handrails, and associated sheds north of the decon pad will be removed. Phase II includes the decon pad, poles and curtains which will not be removed until approval of the Closure Description Document (CDD) for the Closure of Unit 788.3 Protection Area Decon Pad.
